

Jayden Hluszko

Full Stack Engineer

Palgrave, ON | (647) 554-4639 | Jayden.hluszko@gmail.com | linkedin.com/in/jayden-hluszko | jaydenhlusko.netlify.app

SUMMARY

Full Stack Developer and solution architect with over 6 years of experience translating business requirements into scalable, production-grade systems. Combining strong grounding in software design patterns, language-agnostic OOP fundamentals, RESTful .NET API architecture, JSON data manipulation, and service-oriented development with hands-on ownership of multi-tenant platforms serving enterprise SaaS clients. Partners closely with stakeholders to align technical execution with business strategy, and integrates AI-assisted development tools to accelerate feature delivery, streamline testing, and maintain strict quality standards across the stack. Proven track record of cutting client onboarding timelines, eliminating technical debt, and reducing operational overhead through disciplined engineering.

WORK EXPERIENCE

ChannelAssist Jun 2022 - Present

Full Stack Engineer - Remote

- Translate business and stakeholder requirements into scalable system architecture for a global enterprise sales engagement SaaS platform operating in a SOC 2 compliant environment, integrating Angular front-end design with service/controller-based backend patterns and documenting technical designs clearly.
- Analyzed a recurring operational bottleneck in template management and engineered a full-stack Promotion Copy feature using RESTful API contracts and Controller/Service design patterns to deep-copy dynamic forms and templates, cutting creation time by 50%.
- Identified a recurring third-party licensing cost and replaced it with a native Popup Engine using data model design and SQL functions, translating a business cost problem into a durable in-house technical solution.
- Took ownership of a highly scalable, multi-tenant Themeable Design System addressing the business need for infinite client branding with zero code bloat, cutting enterprise client onboarding timelines from months to 2 weeks.
- Audited and updated legacy ASP.NET applications to remediate tech debt, refactoring unoptimized logic into a modernized, self-serve admin platform that drastically decreased operational overhead.
- Optimized data-dense interfaces against Core Web Vitals (LCP, CLS, FCP), leveraging rapid, iterative performance testing to compress load times by 27%.
- Accelerated debugging by reviewing SQL stored procedures and backend logic to identify system bottlenecks.
- Integrated GitHub Copilot and Gemini into daily engineering workflows to accelerate debugging, generate boilerplate, and increase test coverage, significantly reducing cycle times from local development to production.

Bagal – Immigration and Legal Services Dec 2020 - Jun 2022

Full Stack Engineer & Marketing Manager

- Leveraged cross-functional expertise across software engineering and growth telemetry to align technical execution with overarching product strategy.
- Translated firm operational needs into a secure, internal CMS built in C# and Entity Framework, centralizing client records and streamlining matter tracking for paralegals.
- Drove a 450% surge in organic web traffic by rebuilding the public-facing portal using Vue.js and Nuxt SSR, ensuring WCAG 2.1 and AODA compliance.

Freelance Sep 2019 - Present

Full Stack Engineer & Consultant

- Managed end-to-end delivery of web projects including requirements planning, stakeholder facilitation, and vendor coordination.
- Delivered custom full-stack software solutions for SMB clients using .NET/C#, Vue.js, Nuxt SSR, MongoDB, Express.js, and WordPress.
- Architected RESTful endpoints to process, parse, and manipulate large JSON payloads, ensuring reliable data flow between the database and the client interface.

EDUCATION

Interactive Media Design – Web (Honours) Sep 2017 - Apr 2019
Georgian College, Barrie, ON

CORE COMPETENCIES

Strategic & Solution Design • Requirements Analysis & Translation • Solution / System Architecture • Technical Proposals & Specs • High-Availability Systems • Cross-Functional / Async Collaboration • System Modernization • Responsive Design • Azure / Azure DevOps • AI-Assisted Development (Copilot, Gemini, Antigravity IDE)	Architecture & API Design • RESTful .NET APIs • Controller & Service Pattern • Multi-Tenant Design Systems • Visual Studio • MySQL / MS SQL Server • LINQ to SQL / SQL Functions • Stored Procedure Debugging & Analysis • JSON • Docker • Language-Agnostic OOP Execution	Frontend & Backend Systems • Angular / TypeScript • JavaScript (ES6+) • Vue.js (Pinia, Nuxt SSR) • .NET / C# / MVC / Entity Framework • Git / Azure DevOps / CI/CD • SOC 2 / WCAG 2.1 / AODA • jQuery / Telerik • HTML5 / CSS3
